DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-8, drawn to an apparatus, classified in class 425, subclass 130.
 - II. Claims 9-29, drawn to a method, classified in class 264, subclass 572.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the apparatus as claimed can be used to practice another and materially different process, that wherein pressurized compressible fluid is injected more than once.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.
5. During a telephone conversation with Robert Dunn on June 26, 2003 a provisional election was made with traverse to prosecute the invention of Group II, claims 9-29. Affirmation of this election must be made by applicant in replying to this Office action. Claims 1-8 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 1732

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

7. Claims 9-29 are rejected under 35 U.S.C. 102(e) as being anticipated by Eckardt (US 2001/0017433). Eckardt discloses all of the claimed limitations, including injecting plastic material into a mold cavity, injecting fluid along a melt flow path (4) along a sprue (11) into a mold cavity (5), and allowing some of the plastic to overflow into a spill cavity (8) connected by valve means (9) to the mold cavity (page 3, paragraphs 36-38, 40-43). Eckardt also disclose that the injection element (14) maybe be utilized to inject with liquid or gas through a nozzle (10) into the region of the melt flow path (4).

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Thomas (US Patent 6,579,489); Hildesson et al. (US Patent 6,372,177); and Gotterbauer (US Patent 5,759,479).
